SUMMARY

AI Engineer with experience designing and deploying production-grade RAG systems, LLM orchestration platforms, and real-time distributed AI applications. Proven track record of improving retrieval accuracy, reducing latency, and scaling multi-tenant systems.

TECHNICAL SKILLS

Programming: Python, MATLAB, TypeScript, JavaScript, SQL

Generative AI: OpenAI API, Azure OpenAI, Feature Engineering, RAG, Agentic AI, Embeddings, Vector DBs (Pinecone), LangGraph, LLM Caching, Computer Vision (YOLOv8x, BoxMOT), Knowledge Graphs, Prompt Engineering

Machine Learning: PyTorch, TensorFlow, NLP, CNNs, Recommender Systems, SVM, KNN, Naive Bayes, PCA, Clustering

Backend & DevOps: FastAPI, API Design & Integrations, Microsoft Graph API, CRM Systems, Twilio Voice API, Meta WhatsApp Business API, Node.js, REST APIs, gRPC, WebSockets, JWT, OAuth2, RBAC, Microservices, Docker, Kubernetes, Selenium, BeautifulSoup, CI/CD, MLOps

Data & Cloud: PostgreSQL, MySQL, Redis, Azure, ETL Pipelines, Azure Fabric, Pandas, NumPy, AWS, AWS Bedrock

Methodologies: Agile, Scrum, Test-Driven Development

EXPERIENCE

Maaze

Jan 2026 – Present

AI Engineer

- Architected multi-channel Agentic AI frameworks using AWS Bedrock, including an autonomous voice-calling agent via Twilio and a multi-tenant WhatsApp chatbot, scaling to 1,000+ concurrent conversations and reducing manual handling time by 45%.
- Designed a dynamic routing orchestrator with intent parsing to seamlessly direct requests across rule-based engines, hybrid ML pipelines, and LLM agents, improving intent-classification accuracy by 28%.
- Implemented token-optimization strategies within the routing engine using efficient prompting and payload batching, reducing inference costs by 30% during large-scale payload processing.
- Advanced RAG-based architectures by coupling Pinecone vector databases with multi-tenant Knowledge Graphs for entity modeling and structured reasoning, improving retrieval precision by 20% and reducing latency by 30%.
- Engineered an automated AI meeting-assistant bot with real-time audio processing, capable of joining enterprise calls across Microsoft Teams, Google Meet, and Zoom, serving 150+ daily active users at 92% satisfaction.
- Developed a computer vision collision-prediction pipeline integrating multimodal parameters including g-force anomalies and rapid delta-velocity, achieving 92% accident-prediction accuracy in real time.
- Built real-time passenger-counting systems leveraging YOLOv8x and BoxMOT for cross-frame tracking, gender detection, and unique-person counting, sustaining 30 FPS at 96% counting accuracy.
- Designed a signal-processing algorithm in MATLAB to parse continuous 3-axis gyroscope streams at a 10ms sampling rate, triggering vehicle accident alerts via peak-threshold analysis with 98% detection accuracy.
- Deployed an AI computer vision system for MOD Pizza to generate store heatmaps and identify peak foot-traffic hours, directly optimizing targeted marketing campaigns and in-store promo placement, lifting campaign engagement by 18%.

D-Mac

Jan 2025 – Jan 2026

Full Stack Developer

- Led the backend development for VyapaarNiti using Node.js and Express.js, building fast and scalable APIs with response times under 200ms.
- Designed the database structure to securely handle user profiles, service requests, and transactions for 5,000+ expected users.
- Built the core backend for an AI lead search tool, connecting natural-language search inputs to the database to quickly filter thousands of business profiles.
- Designed the backend for GreenCart, a fast-delivery grocery app, building APIs to handle real-time inventory updates and order tracking.
- Added data caching to make the product catalog load in under a second, which directly supported the app's 10-minute delivery goal.

PROJECTS

Enterprise WhatsApp AI Support Assistant | [Github](#)

- Built an intelligent WhatsApp support system leveraging LLMs, RAG architecture, and the Meta WhatsApp Cloud API.

AI Document Intelligence Platform | <https://doc.anshu.me>

- Built an AI-powered document intelligence platform for intelligent document analysis, search, and question answering.

MOD Pizza AI Customer Analytics | [Github](#)

- Developed an AI-powered customer analytics system for MOD Pizza using computer vision to analyze footfall, crowd patterns, seating behavior, peak hours, and customer preferences.

GPS AI Voice Assistant Agent | [Github](#)

- Built an AI voice-calling agent for automated customer conversations, query handling, and support workflows.

Automated AI Quotation Generator | <https://ai-quotations.littlejalebis.com/quotation-maker>

- Developed an AI quotation generator that converts customer requirements into structured, professional quotations automatically.

EDUCATION

Indira Gandhi National Open University

Bachelor of Science in Computer Science

2023 – 2026

New Delhi, India
